

Secure communications, from HQ to battlefield

Webex for Defense HCS-D - IL5 Authorized

Nothing is more critical to successfully conquering today's threat scape than making sure US DoD communications traffic is secure and reliable. Webex for Defense HCS-D answers the call.

Now DoD employees and approved contractors can collaborate securely across the NIPRNet using their choice of compliant Cisco devices. This flexibility with Webex for Defense HCS-D, enables the DoD to make faster and more informed decisions.

Market-leading collaboration

One service, one experience, for every Department of Defense user

Department of Defense IL5 Security

Security

- NIST 800-171 and NIST 800-53 for improving risk management of DoD information
- All provider-held data remains in the U.S., and support is delivered by cleared U.S. citizen IT professionals
- FIPS 140-2 end-to-end encryption for all traffic between endpoints
- Extensive controls help eradicate vulnerabilities and exploits proactively through continuous monitoring

Simplicity

- Simplifies procurement and reduces compliance headaches
- Automatically updates Cisco managed Apps and security features
- Subscription-based services reduce the number of DoD collaboration procurements, deployments and migrations
- Cloud delivered, no on-premises footprint is needed beyond your endpoint devices
- Seamlessly connects with Cisco Survivable Remote Site Telephony (SRST) for on-premises survivability

Agility

- Moving from CAPEX to OPEX helps budgeting and can lower cost
- Optional integrated on-premises solution available for critical customers to provide additional survivability
- Flexible purchase contracts for easy growth allotment and adapting to long-term cloud strategies
- Interoperability between different collaboration systems and platforms including Microsoft applications and calling from within MS Teams
- Cisco hosting and management frees you to focus on strategic priorities

Mission enablement

- Satisfies the DOD cloud-first mandate while still allowing agencies to leverage existing communications investments
- Greater command and control capabilities by connecting forces with multiple communications devices
- Faster, more accurate decision making with encrypted communications to and from offices and remote field locations
- Collaborate seamlessly to anywhere with NIPRNet access, using chat, video, or phone
